Secrets of Monitoring Well Design

Is the groundwater monitoring well such a common feature of environmental projects that its design is overlooked?

Consultants typically locate their planned monitoring wells on a two-dimensional map, but too many of the work plans and cost estimates we receive fail to tell us what you're thinking about the third dimension: How deep do you plan to drill? How do you plan to construct the well? What will the screened interval be? What site conditions prompted the design? These features are critical to understanding what information you are planning to get from the well and how you plan to use it. Your site conceptual model holds the secrets to these design details – Please don't keep them a secret from us!
